Senior Network Engineer

Apply Now

Company: BQ International Inc

Location: Regina

Category: computer-and-mathematical

Description:

Background

Our client's Information Systems is seeking a resource to join their Network Infrastructure Operations team. The successful candidate will work within the existing team to help with the design and implementation of the various components of the LAN/WAN/WLAN infrastructure. The resource will follow team standards based on **current industry and security best practices for the configuration and implementations of network infrastructure**. The resource **MUST** have a minimum **7 years** of recent and practical network engineer experience, including 5 years in a senior network engineer role.

Description of Requirements

Ideally, the resource will have:

  Proven proficiency in working with Cisco switches, routers, firewalls, WLAN Controllers and WAPs

  Proven proficiency designing and implementing LAN/WAN/WLAN networks in a multi-site environment

  Proven proficiency working with Cisco CLI for IOS, ASA, IOS-XE and NX-0S

  Proven proficiency with network security best practices

  Experience designing and implementing network technologies to support organizational technology projects

  Experience in influencing and establishing collaboration direction within an organization

  Experience in enterprise environments involving network design and implementation

Understanding of integrating an on premise environments with cloud environments

North American job experience

Typical activities in this role include:

Design, implement and administer the enterprise network environment including LAN, WAN and WLAN services.

Helps prepare plans for development and installation of network devices according to present and future requirements and standards

Provides expert technical support, administration, and engineering for enterprise network infrastructure devices

Monitoring, performance tuning, troubleshooting and resolution of system problems to ensure system availability

Manage and maintain network disaster recovery including planning, implementation, maintenance and testing

Works with network patch management processes and procedures to facilitate deployment

Maintains systems integrity through change control and problem management procedures and communication with internal customers

Accomplishes department objectives by working with other team members; organizing and monitoring work process

Follows Standard Operating Procedures when carrying out position responsibilities

Attends and participates in team meetings

Works with the Enterprise and Solution Architecture team, Enterprise Security and other business leads to establish scalable network solutions.

Act as a representative of Information Systems

The preference for start date is as soon as possible. **The initial term for this role(s) will be up to one (1) year** after which client will evaluate its on-going requirements and potentially extend the term for this resource in accordance with the terms and conditions of the proponent vendors Master Services Agreement.

The resource will be required on site at Client's Head Office in Regina, Monday to Friday 8 am to 5 pm and the proposed hourly rate shall be **inclusive of all travel and living costs** (PST and GST are extra). Occasional travel to support offices across the province will be required.**Submitted resources MUST have a valid Class 5 Saskatchewan Driver's License or equivalent to be considered.**
